Retailers

Sustainable Manufacturing

The impact of supply chains is massive

Sector emissions

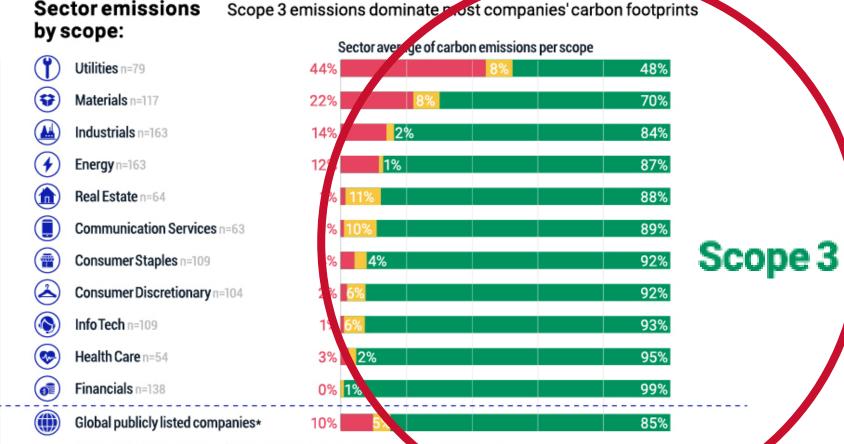

Greenhouse gas emissions comprise three scopes:

*As indicated by constituents of the MSCI ACWI Index whose Scope 1, and 3 emissions were reported by the companies or estimated by the MSCI Climate Chang. Metrics Methodology Source: Carbon Disclosure Project, MSCI ESG Research LLC as of Jan. 5, 202

Globally, it is an "information & coordination" problem

Material Flow

RAW MATERIALS

Only a small portion of information is shared upstream.

Most information is lost by the time the raw materials are turned into a product.

Material Flow

SUPPLY CHAIN

Current "1- up / 1-down" visibility can't support today's data requirements.

Only a handful of mandatory data points are shared endto-end.

Material Flow

MANUFACTURING

Price & specification data isn't enough to make better material & design decisions.

Due diligence, compliance, and sustainability processes are extremely complex & time consuming. High Risk!

Material Flow

USE/REUSE

Use-stage data is essential for re-use, repair & recycling, as well as design decisions.

Critical information is lost before product reaches its end-of-life.

Material Flow

RECYCLING/RECOVERY

Unknown presence of toxic substances puts the quality of recycled materials at risk.

Unknown value of "waste" makes recycling markets difficult to establish.

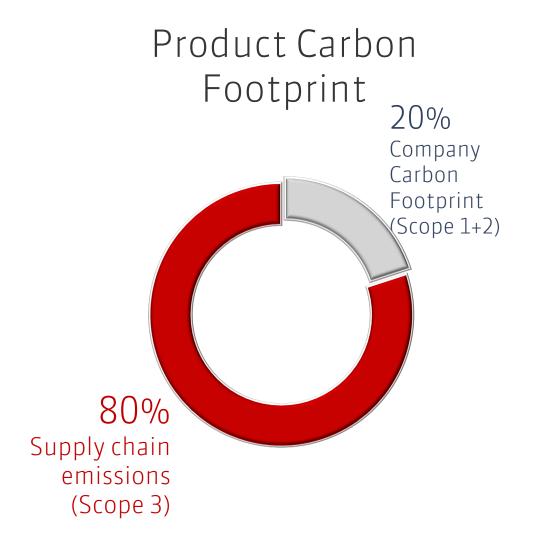

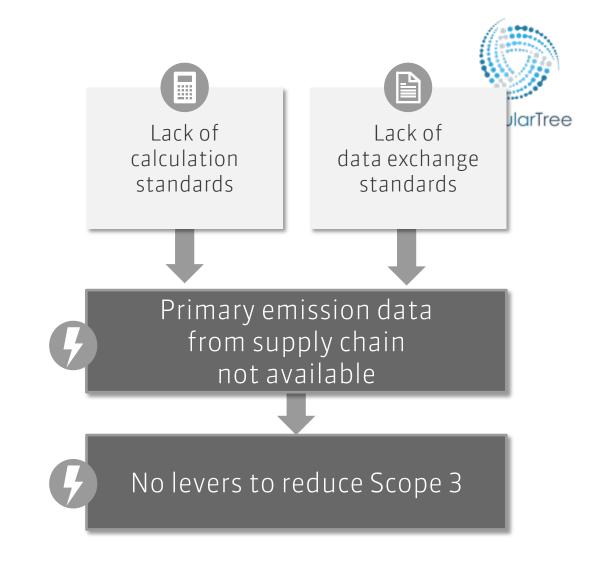

CarbonBlock

Accounting for real primary carbon footprint of supply chains

The Challenge

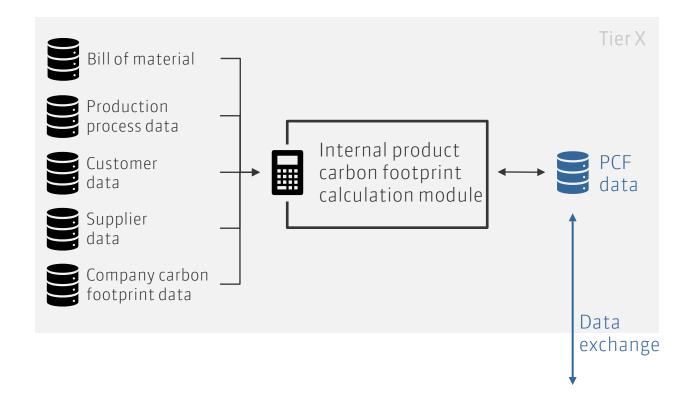

How it works

Tier X+1

Tier X-1

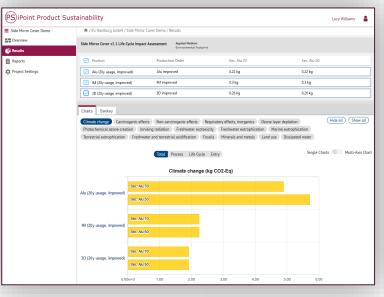

How it works

PCF Porsche

CarbonBlock Ecosystem

Methodology

Building a consistent methodology that enables generation of comparable, verified product-level primary emissions data

Technology / interoperability

Developing open technology standards that allow for secure data exchange across different technology solutions

Ecosystem

Reaching a wide ecosystem – piloting in the Fast-Moving Consumer Goods sector and scaling to multiple industry value chain

SustainBlock

Blockchain-based supply chain accountability, traceability and data reporting system

SustainBlock is a platform for supply chain accountability, traceability and data reporting.

It enables supply chain participants to:

- demonstrate supply chain accountability from (ASM) mine sites all the way to mineral and metal end-users, and in turn
- provide downstream companies with access to information on the provenance of minerals contained in their products;
- unlock value from upstream due diligence data and generate incentives for responsible procurement of minerals from CAHRAs, in compliance with the OECD Due Diligence Guidance.

SustainBlock pilot involves a Tungsten mineral supply chain starting in the African Great Lakes Region.

iPoint-systems

Building a digital circular economy

Our Purpose

Advancing digitalization for sustainable change.

Our Vision

To be the best partner for fully digitalized life cycles of truly sustainable products.

Our Mission

To accelerate the transition to the circular economy.
